Subject: RE: Updated Agenda

Four our discussion today, EPA 537 information from VT

The Vermont Department of Health, pursuant to 18 V.S.A. § 501(b), certifies laboratories that perform drinking water testing and monitoring as required under 10 V.S.A. Chapter 56 and the Federal Safe Drinking Water Act.

<http://legislature.vermont.gov/statutes/section/18/009/00501b>

The Department will consider issuing a certificate to a laboratory testing drinking water using EPA Method 537 if that laboratory is accredited by a National Environmental Laboratory Accrediting Program (NELAP) recognized Accrediting Authority (AA) to National Environmental Laboratory Accrediting Conference (NELAC, now the NELAC Institute [TNI], <http://www.nelac-institute.org/>) standards for the method.

The Department is aware that EPA has approved some laboratories for the third Unregulated Contaminant Monitoring Rule for EPA Method 537 and that the method is not widely used. The Department may consider laboratories approved by EPA using UCMR 3 Laboratory Approval Requirements and Information Document as an interim requirement for certification in Vermont.

William George Mills, Inorganic Program Chief and Laboratory Certification Officer,
Vermont Department of Health Laboratory.
